

SEALENCE S.p.A. - SB

water is the only footprint you will leave behind

SEALENCE S.P.A - S.B., headquartered in Buccinasco (MI), was founded in 2017 by William Gobbo with the objective of pursuing the design, development, production, and distribution of an **innovative propulsion system for the electric marine sector, based on high-efficiency hydrojet.**

With its new technological solution, SEALENCE aims to **revolutionize the marine industry, from recreational to transportation**, by improving efficiency and performance compared to both propeller propulsion and inboard hydrojets.

SEALENCE's **innovative electric jet propulsion is based on a patent, filed worldwide** and already granted in more than 30 countries, written with Prof. Ernesto Benini of the University of Padua, a consultant for the world's leading aeronautical jet manufacturers and still a member of the board.

The technology developed involved the study and application of **innovative fluid dynamic concepts**, the use of new materials, the introduction of **sophisticated computational algorithms and artificial intelligence** as well as advanced manufacturing systems.

The SEALENCE's electric jet propulsion enables better efficiency reducing costs and significantly lowering water, noise, and Co2 pollutant emissions.
